

The student of lecturer can login with the CWIPS protocol.

This is the main screen of the app.
There are 4 clickable cards

When clicked on book a room, the user can select the date, then the timeslot. Timeslots are slots of three hours. Then, the user can select some filters, for example whether there is or is not a beamer or windows that can set open. When clicked on search a room ->

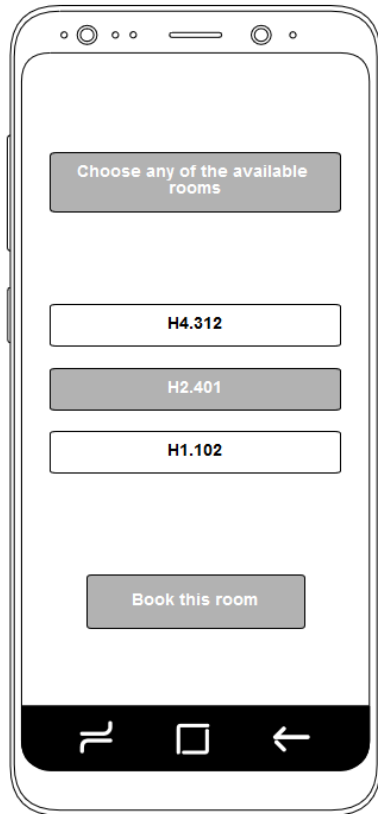

The mobile app interface shows a form for booking a room. It includes two dropdown menus for 'Select date' and 'Select timeslot', a 'Select filters' button, and a 'Search a room' button. A filter overlay is shown to the right of the main screen, listing various filters with radio buttons:

More than 5 people?	<input type="radio"/>
Beamer	<input type="radio"/>
Whiteboard	<input checked="" type="radio"/>
Windows that open	<input type="radio"/>
To fill in	<input type="radio"/>

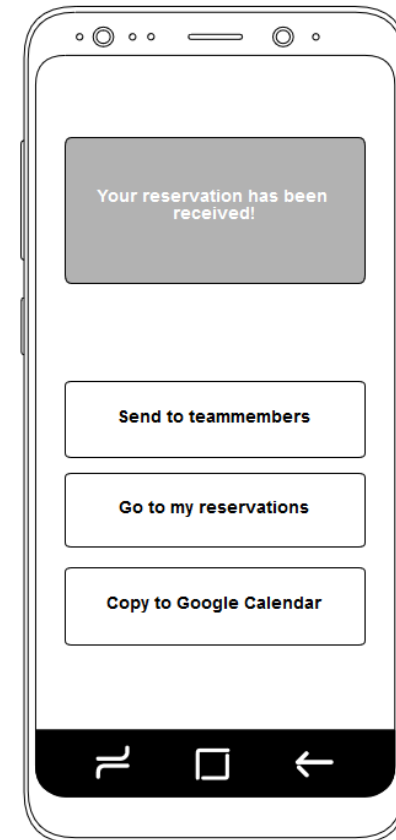

-> The user gets to see the available rooms. When clicked on the room ->

The mobile app interface shows a list of available rooms. At the top, there is a button labeled 'Choose any of the available rooms'. Below this, there are three buttons representing different rooms: 'H4.312', 'H2.401', and 'H1.102'.

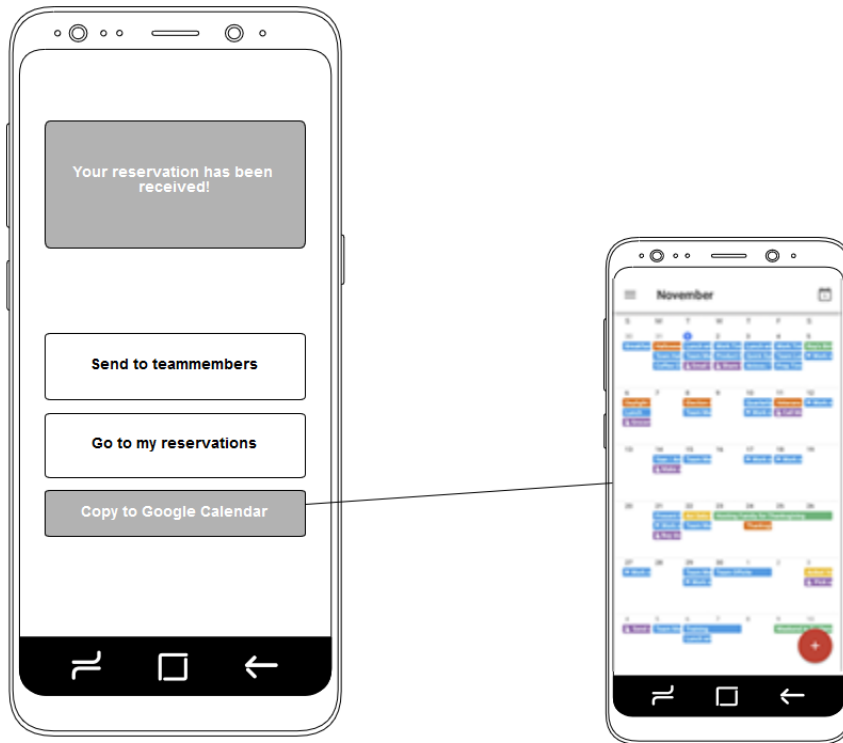

-> the user can eventually book the room.

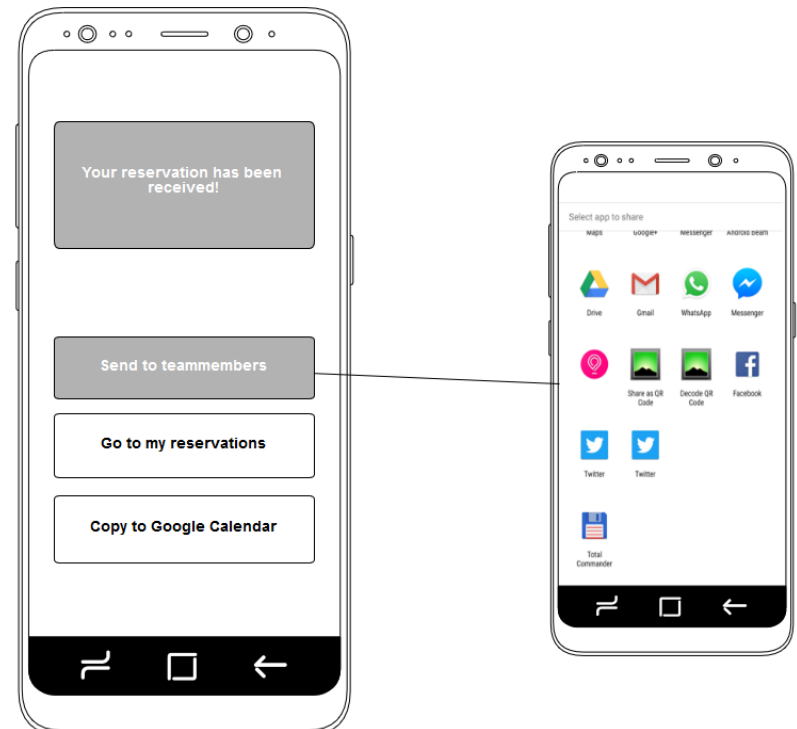

A confirmation screen is shown after the room is booked. There are three options to click on.

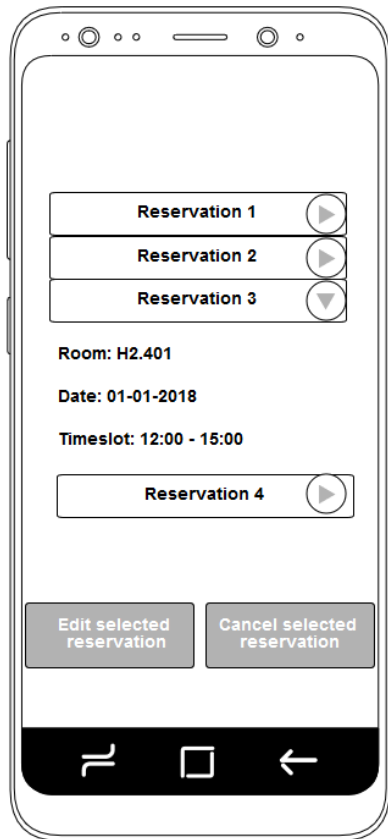

It is possible to send the reservation into the users own Calender scheme, for example Google Calendar. It makes a link which will automatically create an event in the Calender.

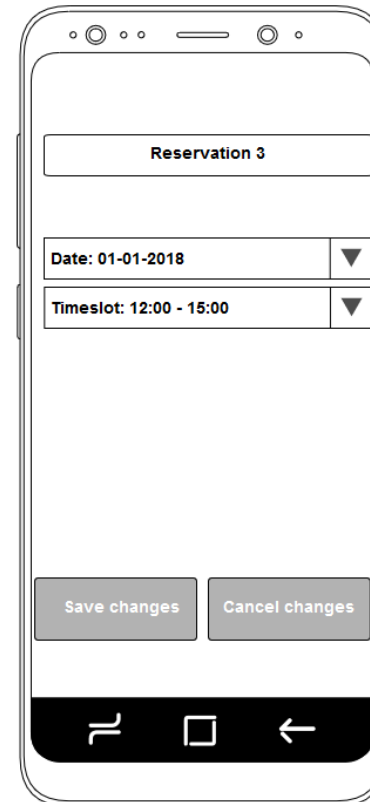

It is also possible to share the appointment with other teammembers via social media, for example WhatsApp of gMail.

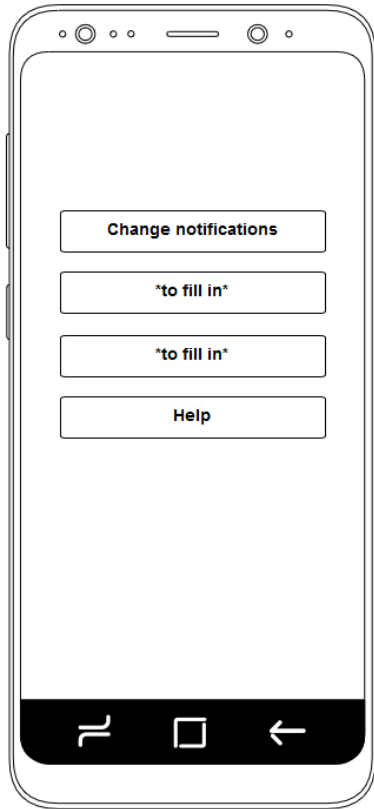

After clicking on 'go to my reservations', the screen is the same as clicked on the homescreen's 'my reservations'. It will give a list of your own reservations, which you can edit or cancel.

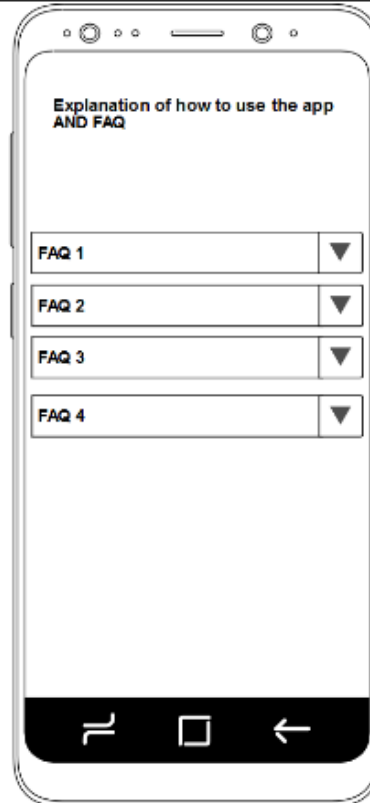

When editing the reservation, this screen is shown where the user can edit the date and time. The user cannot edit the room, therefore the reservation has to be cancelled and a new reservation must be made.

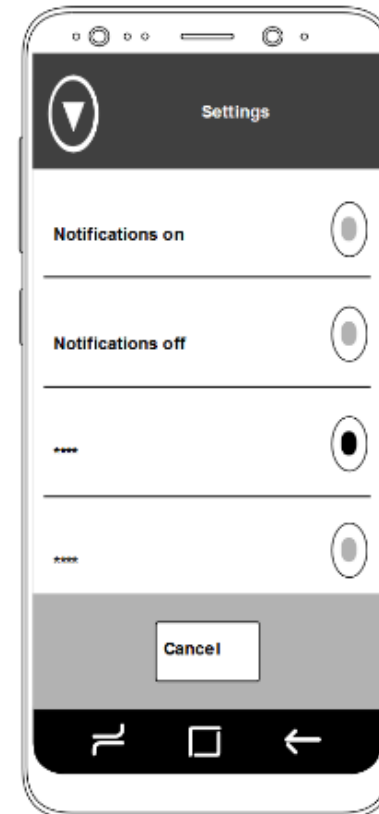

In the settings page, the user can change the notifications, can see the help page or can do other things

In the help section, a little information is shown to explain how the app works. Underneath the explanation there are FAQ's

In the notifications menu, the user can switch on or switch off the notifications for example the reminders of a reservation.

When the user clicked on the main screen on QR Code, the camera will pop up. When the code has been scanned, the next screen will pop-up

Each room has a different QR code. When successfully scanned, it shows whether the room is now available or not. When yes, it shows till which timeslot, for example till 15.00h. The user can immediately make a reservation or cancel the activity.
